

Team Member 1 - Brian Craciun:

- Established the three index pages as well as reviews display, and write reviews page
- Integrated the JS with the JSON files to display movies
- Implemented the Reviews display page
 - As well as incorporating images
- Fixed Write Review Button Bug
 - Was only working on one of our computers

Team Member 2 - Muhammad Blal:

- Worked on the "Write a Review" tab where I implemented to select a movie, writing the review, and rated the movie with their respective ratings stars. I also added a Bootstrap radio button for each of the rating stars.
- Changed the "Write a Review" tab into a Bootstrap framework to make it look cleaner
- Worked on the "Reviews" tab where all of the movies that were rated were shown with their respective ratings, name of the movie with posters, and the timestamps/dates of when the review of the movie was given

Communication and Collaboration:

- We communicated in person the entire project and completed in person together
- We worked together to have each others visions come to life
- We implemented and merged with in depth reviews
- We discussed designs and wireframes for our website
- We talked about the movies that we saw
- We took a break and ate lunch and then began working again to give our minds a break
- We stylized and cleaned up any last code or bugs that needed to be fixed.
- The work was split up evenly and collaboration was well executed
